COMPLIANCE IN CONSTRUCTION

The Future of Fire Door Traceability for Manufacturers & Installers

v 1.0

DOOR DATA SYSTEMS

COMPLIANCE IN CONSTRUCTION

Our technology ensures fire doors are **installed, inspected, and maintained** with full traceability, helping businesses stay compliant and safe.

doordatasystems.co.uk

BUILDING A SAFER FUTURE THROUGH INNOVATION

At Door Data Systems, we set out to create a market-leading application that supports all sectors involved in fire door compliance. From the outset, we knew that for our system to be truly valuable, it had to be independent, user-friendly, and adaptable.

During our early development, it became clear that the fire door industry had long struggled with poor data management. Many businesses operated in silos, keeping critical information locked away rather than sharing it for better compliance and safety. We recognised that this needed to change.

As regulations tightened, forward-thinking companies joined us, recognising the need for transparent, accessible fire door data. Our customers – or partners, as we call them – have embraced this ethos, and together we are building a national standard for fire door compliance.

The National Firedoor Register is a comprehensive database developed to support all trades, persons, and companies engaged with the supply, installation, assessment, and management of fire doors in buildings.

Powered by Door Data Systems' web and mobile applications, it ensures critical data is available to those who need it, when they need it, following the principles of 'golden thread' thinking. The system is designed to bring benefits that far outweigh any associated costs, making compliance simple and effective for all users.

We are proud to work alongside the country's leading door manufacturers, national passive fire specialists, and facility managers. Our technology continues to evolve, adapting to industry demands and integrating with other leading software solutions to ensure seamless data sharing and compliance management.

FIRE DOOR SAFETY STARTS WITH DATA

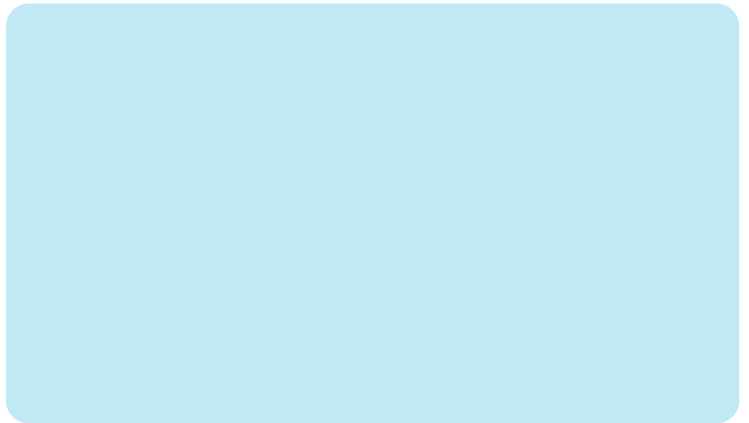

MANY BENEFITS FOR YOUR SECTOR

MANUFACTURERS

Fire door manufacturers play a crucial role in ensuring safety and compliance from the very beginning of the supply chain. Door Data Systems supports manufacturers by digitising every step of the production and delivery process, ensuring each door is fully traceable from factory to final installation.

Every manufactured door can be assigned a unique NFC tag or digital identifier, linking directly to the National Firedoor Register. This digital record captures all essential data—specifications, materials, performance ratings, certification, and warranty details—creating a complete digital passport for every door produced.

Our platform integrates easily with existing manufacturing systems through API connections or CSV uploads, making it simple to transfer door data directly into customer accounts. This allows manufacturers to fulfil their legal and moral duties by providing accurate, accessible fire door information to those who install, inspect, and maintain them.

Save time on documentation and record-keeping

Deliver compliant, data-rich products to customers

Demonstrate transparency and commitment to fire safety

Provide long-term value to clients with lifetime digital records

Partnering with Door Data Systems isn't just about compliance; it's about leading the industry in digital responsibility and assurance.

INSTALLERS

The installation stage is where compliance becomes visible, and Door Data Systems ensures every fire door installation is recorded, verified, and traceable. Our system gives installers the tools to evidence their work with confidence while streamlining project management.

Through our installer-friendly mobile app, on-site teams can scan tagged doors, upload installation photos, and document every step of the process. The app links each installation to its door record, storing all data securely on the National Firedoor Register.

With a dedicated Installer Dashboard, companies can manage multiple sites, assign work, and monitor progress in real-time. Each door record includes installer details, timestamps, and photo verification, creating a transparent audit trail for clients and regulators alike.

Complete digital proof of work
for every project

Simplified compliance with
third-party schemes

Reduced admin and faster
project sign-offs

Unlimited users and no costly
software licenses

Whether fitting one door
or thousands, **Door Data
Systems** makes installation
documentation effortless

THE TECHNOLOGY

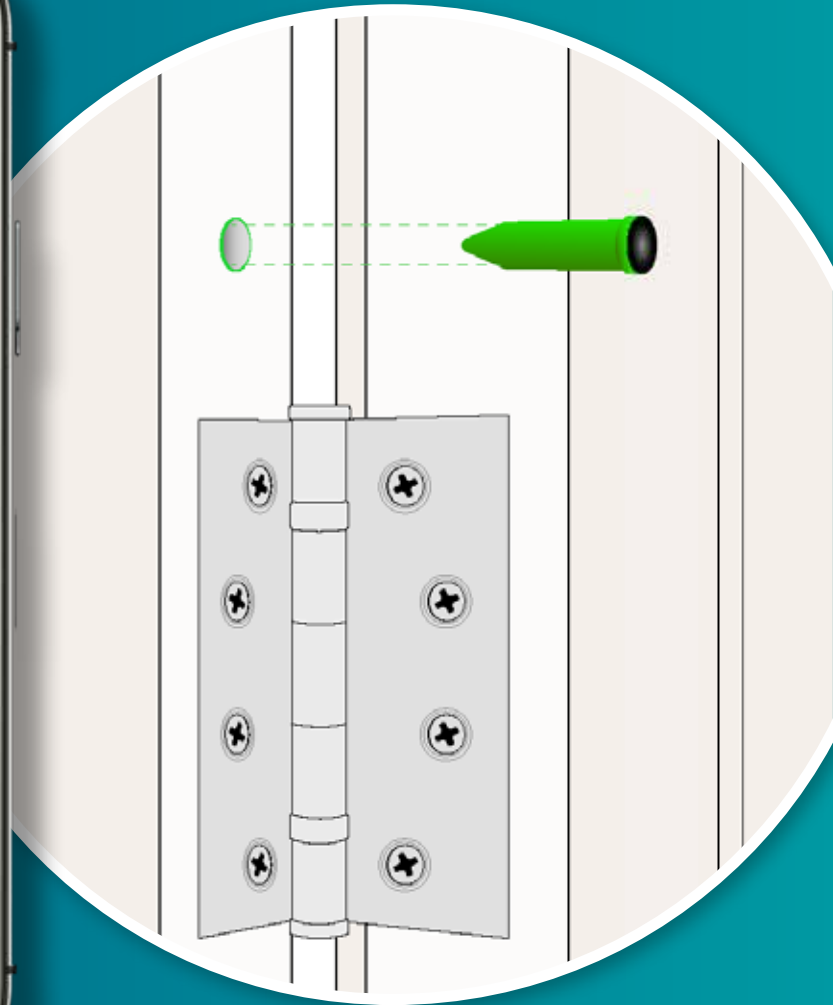

SMART TECHNOLOGY FOR TOTAL FIRE DOOR TRACEABILITY

Key Features:

-  **NFC Tagging & OEM Data Integration**
Each door is uniquely tagged, and data is bulk uploaded for quick and easy registration.
-  **Secure Cloud-Based Data Management**
Real-time updates via a cloud platform provides on-demand access through web and mobile applications.
-  **Installation & Compliance Tracking**
A simple scan provides access to all records such as installation, maintenance and more.
-  **Fire Door Inspection & Reporting**
Inspectors can use existing labels added by manufacturers. Voice-activated reporting now also available.
-  **Offline Functionality**
Full support for offline operation ensures functionality in all working environments, with an auto-sync once a connection is re-established.

Benefits:

-  **Faster door registration and data retrieval**
-  **Consistent installation and compliance reporting**
-  **Enhanced security with cloud-based storage**
-  **Optimised workflows for installers and inspectors**
-  **Seamless operation in offline environments**

JOIN US IN SHAPING THE FUTURE OF FIRE DOOR SAFETY

The National Firedoor Register, powered by Door Data Systems, is setting a new standard for fire door compliance. Whether you're an installer, inspector, responsible person, or principal contractor, our system gives you the tools to ensure compliance with ease.
